

Centro Secure QR Codes for 2N

Centro Secure QR Codes with 2N eliminate the risks of static credentials by replacing them with rolling, time-bound codes that refresh automatically. Provisioning access codes that change as fast as your needs—always fresh, never reused.

Centro Secure QR Codes for 2N

As the world shifts toward effortless digital access tools, building operators need solutions that combine simplicity with security. Residents, guests, and staff expect smooth entry experiences, but operators still require confidence that every credential is verified, time-bound, and properly controlled. Success lies in delivering seamless access while safeguarding both people and property.

Centro Secure QR Codes integrate directly with 2N QR-enabled intercoms to deliver dynamic, rolling codes that refresh automatically. Every customer, resident, guest and staff member receives a credential that is time-bound, automatically refreshed, scope-limited, and fully tracked through the Centro platform. Operators can configure access by time, location, or event, while users enjoy effortless, app-driven entry. The system balances convenience and control, ensuring security without slowing down everyday operations.

Utilising Centro Secure QR Codes, operators can confidently offer digital entry that is both effortless and fully controlled. Users enjoy seamless, app-driven access that automatically updates within time, location, and usage limits, while building management gains real-time oversight to prevent unauthorized entry and enable safe, flexible use of spaces. Operators maintain control and security, while safely opening premium spaces for revenue opportunities and reducing administrative overhead.

Protect

Replace static codes with rolling, uncopyable credentials.

Assure

Ensure only intended users gain access at the right time.

Simplify

Users always see a valid code in their app, no manual refresh needed.
