

2N Integration

Our 2N plugin integration allows you to connect multiple users to communal entry intercoms.

2N Integration

2N are a manufacturer who set the trends for IP door access control systems and elevator communications. 2N developed the first LTE and IP intercoms in the world, and their products continue to innovate and push market standards. An international company with branches worldwide and trained distributors located in 130 countries - so you can be assured of pre-sales and after-sales support are always close at hand. Centro worked on our very first projects with 2N integration at the heart, connecting multiple users to door access and lift pathways throughout the property.

Trusted Partner

2N products are trusted in projects around the world. We have been integrating them into sites for many years as a trusted partner.

Secure

Security is 2N's number one priority. To underscore our commitment to cyber security, our methods have multiple layers of protection.

History

Established in 1991 2N quickly became a leader in developing telecommunication solutions.

User Experience

There are numerous possibilities when integrating 2N solutions with Centro. The user experience is seamless, allowing users to enjoy the full benefits of the system without needing to interact with the hardware directly.

Whether accessing the property remotely or in person, our deep integration with 2N's infrastructure ensures that users can utilize the Centro App or Centro Wallet pass to enter through 2N door entry intercoms and access units.

Users can also manage guest and contractor access directly from their app, issuing time-limited passes or revoking them in real-time.

Additionally, lift and lighting pathways can be easily integrated into the system.

Admin Experience

Connection options are flexible, you can connect cloud to cloud using My2N trusted cloud platform or talk to individual hardware items directly using the local hardware api. Service accounts and User accounts can be synched with the Centro database allowing the seamless configuration of data within the system. Data and audit logging, Data is gathered on all system interactions and can be extracted for use in other systems or displayed within the Centro Data dashboard.
